

The BondKap® Advantage

The BondKap® Attachment System enables security film to resist repeated attempts to smash the window and physically push the glass out of the frame. While security film helps keep the glass together, the BondKap® Attachment System helps keep the film/glass combination locked to the perimeter of the frame in the event of an attempted break-in, hurricane, or other disaster.

- 8 Profiles to Accommodate Most any Window or Door
- Assures Proper Amount of Silicone is Applied
- Silicone Approved by GSA for Bomb Blast Mitigation
- No Concerns About Customers Touching Wet Silicone
- Original Manufactured Appearance
- Wipes Clean with Standard Window Cleaner

BondKap® is an anchoring system for hurricane and safety film installations. The BondKap® plastic cover strip provides an original manufactured appearance to the door or window. Installation using a tested and approved structural adhesive, such as Dow Corning 995, strengthens the door or window assembly.

The silicone-based structural adhesive, which provides exceptional performance characteristics, has met or exceeded testing guidelines.

The BondKap® cover strip is designed for optimal coverage of the adhesive as specified for attachment.
